

one headset, two functions

The new Voyager 510 USB is the ultimate Bluetooth® headset, offering seamless sharing between mobile phone and PC. Now users only need to carry one headset with them, to satisfy all their travelling communications needs.

Uniquely with the Plantronics Voyager 510 USB you can seamlessly share one headset between both a mobile phone and a PC. Using multi-point technology, the Plantronics Voyager 510 USB headset automatically manages the link – so it is permanently ready to be used with both mobile and soft-phone.

IP telephony offers a massive opportunity to cut communication costs, as well as increasingly sophisticated functionality. Using a PC to talk and collaborate will soon be as normal as using it to type. With a softphone-equipped laptop, for example, users can now take full advantage of WiFi hotspots to take and make calls, wherever they are, with all the functionality they're used to when in the office.

- Voyager 510 USB headset shares seamlessly between mobiles and PC/laptop
- No equipment to install bluetooth on PC - just plug-and-play USB Bluetooth Voice adapter
- PerSonoCall™ software provides softphone call notification and the ability to answer and end calls via the headset
- Noise-cancelling microphone with Windsmart technology - ideal for noisy WiFi hotspots such as airports
- Up to 6 hours talktime, up to 100 hours stand-by and a compact USB travel charger
- All-day wearing comfort and superior sound quality
